No new problems.

Still to fix

14

- Your main content takes 2.9s to appear (good: under 2.5s). (LCP, measured in Google's lab test, as no real-visitor data exists yet.)
- 26 of your 28 images don't declare their width and height.
- Google rates your homepage's speed on phones 87 out of 100. The main content appears after 2.9 seconds.
- Elements must meet minimum color contrast ratio thresholds (1 element on your homepage).

> 1 of the 3 pages we checked skips heading levels (for example from H2 straight to H4).

and 9 more

1 problem was found by checks we've added since then, so it isn't counted as new. You'll find it in the list below.

DIAGNOSIS

Fix these first

If you only fix a few things, fix these: they cost your business the most.

1

Needs treatment

Accessibility

Elements must meet minimum color contrast ratio thresholds (1 element on your homepage).

Text with too little contrast is hard to read for older visitors, people with low vision and anyone using a phone in bright sunlight.

The solution

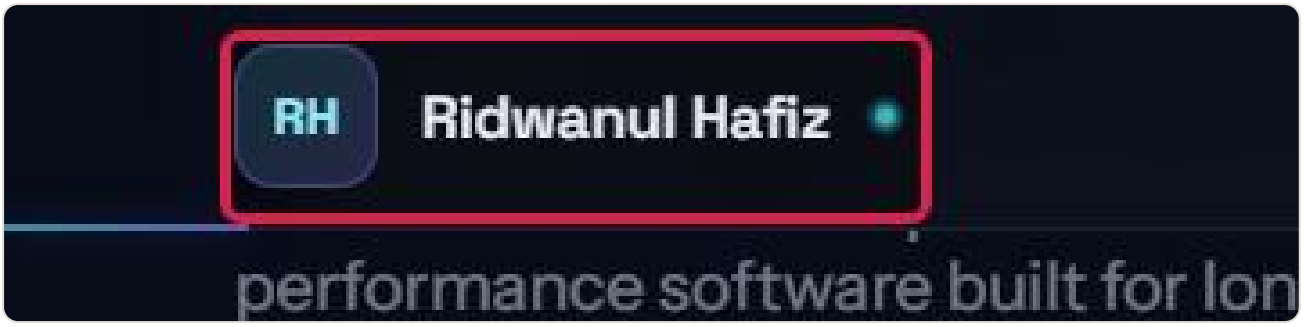

Below you can see the element: where it is on the page (outlined in red), what exactly is wrong, and its HTML. Make the text darker or its background lighter (or the other way round) until the contrast reaches the ratio shown. A free checker: https://webaim.org/resources/contrastchecker/ Step-by-step guidance: https://dequeuniversity.com/rules/axe/4.14/color-contrast?application=axeAPI

2

Needs treatment

Accessibility

Elements must have their visible text as part of their accessible name (1 element on your homepage).

Voice-control users say the visible label to click a control; if the hidden name differs, the command doesn't work.

The solution

Below you can see the element: where it is on the page (outlined in red), what exactly is wrong, and its HTML. Step-by-step guidance: https://dequeuniversity.com/rules/axe/4.14/label-content-name-mismatch?application=axeAPI

3

Needs treatment

Agentic browsing

When an AI assistant visits your homepage it is refused (HTTP 429), while normal visitors get the page.

Many firewalls and CDNs (such as Cloudflare's bot protection) block or challenge AI assistants by default, even if your robots.txt welcomes them. They then simply can't read your site.

The solution

In your CDN or firewall settings, allow verified AI crawlers (in Cloudflare: Security > Bots, and check "AI Crawl Control"), or add an exception for their user agents.

TREATMENT PLAN

All issues

19 to fix · 8 good to know · about 2 days of work

Sorted by business impact, quick wins first.

NEEDS TREATMENT Accessibility Quick win

Elements must meet minimum color contrast ratio thresholds (1 element on your homepage).

Why it matters for your business

Text with too little contrast is hard to read for older visitors, people with low vision and anyone using a phone in bright sunlight.

How to fix it

Below you can see the element: where it is on the page (outlined in red), what exactly is wrong, and its HTML. Make the text darker or its background lighter (or the other way round) until the contrast reaches the ratio shown. A free checker: https://webaim.org/resources/contrastchecker/ Step-by-step guidance: https://dequeuniversity.com/rules/axe/4.14/color-contrast?application=axeAPI

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

Where on the page

"SAAS & MULTI-TENANT PLATFORMS ◆" — Element has insufficient color contrast of 3.56

What's wrong

Element has insufficient color contrast of 3.56 (foreground color: #646771, background color: #05070f, font size: 9.0pt (12px), font weight: normal). Expected contrast ratio of 4.5:1

Sample text

Contrast now 3.56:1, needs at least 4.5:1.
Text #646771 on #05070f.

```
HTML: <span class="marquee-item">SaaS &amp;amp; Multi-Tenant Platforms<span class="marquee
-sep">◆</span></span>

CSS selector: .marquee-item:nth-child(3)
```

NEEDS TREATMENT Accessibility Quick win

Elements must have their visible text as part of their accessible name (1 element on your homepage).

Why it matters for your business

Voice-control users say the visible label to click a control; if the hidden name differs, the command doesn't work.

How to fix it

Below you can see the element: where it is on the page (outlined in red), what exactly is wrong, and its HTML. Step-by-step guidance: https://dequeuniversity.com/rules/axe/4.14/label-content-name-mismatch?application=axeAPI

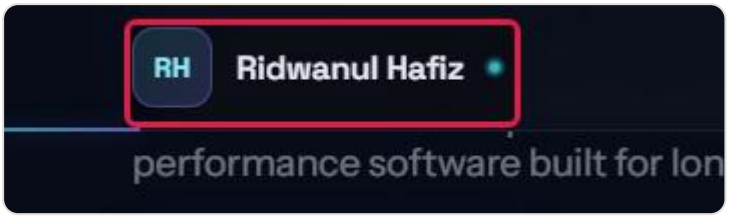

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

Where on the page

"RH Ridwanul Hafiz" — Text inside the element is not included in the accessible name

What's wrong

Text inside the element is not included in the accessible name

```
HTML: <a href="https://ridwanulhafiz.me" class="nav-brand" rel="home" aria-label="Ridw
anul Hafiz — home">
            <span class="nav-badge">RH</span>
            <span class="nav-name">Ridwanul Hafiz</span>
            <span class="nav-dot"></span>
        </a>

CSS selector: .nav-brand
```

NEEDS TREATMENT Agentic browsing Quick win

When an AI assistant visits your homepage it is refused (HTTP 429), while normal visitors get the page.

Why it matters for your business

Many firewalls and CDNs (such as Cloudflare's bot protection) block or challenge AI assistants by default, even if your robots.txt welcomes them. They then simply can't read your site.

How to fix it

In your CDN or firewall settings, allow verified AI crawlers (in Cloudflare: Security > Bots, and check "AI Crawl Control"), or add an exception for their user agents.

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

WORTH FIXING Performance Quick win

26 of your 28 images don't declare their width and height.

Why it matters for your business

When the browser doesn't know an image's size in advance, the page jumps as each image loads, a main cause of visitors tapping the wrong thing.

How to fix it

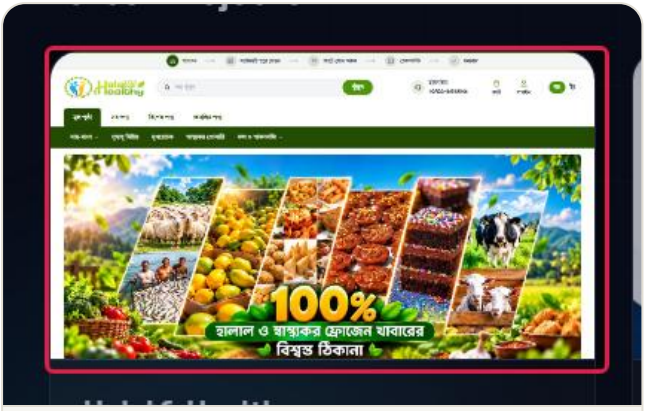

Add width and height to each <img>, e.g. <img src="cake.jpg" width="800" height="600" alt="...">. CSS can still make them responsive.

Time: about 20 minutes. You can usually do this yourself.

WORTH FIXING · Best practices · Quick win

Other websites could embed your pages in a hidden frame.

Why it matters for your business

Without it, another website can show your pages inside an invisible frame and trick visitors into clicking buttons they can't see ("clickjacking").

How to fix it

Send X-Frame-Options: SAMEORIGIN, or add frame-ancestors 'self' to your Content-Security-Policy.

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

WORTH FIXING · Best practices · Quick win

Browsers aren't told to always use the secure version of your site.

Why it matters for your business

HSTS tells browsers to always use the secure version of your site, even if someone types http:// or clicks an old link, closing a gap attackers can use.

How to fix it

Send the header Strict-Transport-Security: max-age=31536000; includeSubDomains from your web server or CDN.

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

WORTH FIXING · SEO · Quick win

1 of the 3 pages we checked is missing the structured data it should have, or has it incomplete.

Why it matters for your business

Structured data (schema.org JSON-LD) tells Google and AI assistants exactly what each page is: your business and its contact details, an article and its author, a product and its price. It earns richer search results (stars, prices, FAQs, breadcrumbs) and makes AI answers quote your real details.

How to fix it

Below is a complete JSON-LD block for each page. Paste it into that page's <head> (or ask your developer, or use your website builder's SEO settings), replace every "REPLACE: ..." value with your real details, then test the page with Google's Rich Results Test: https://search.google.com/test/rich-results

Time: about 20 minutes. You can usually do this yourself.

Where

https://ridwanulhafiz.me/

WORTH FIXING · Agentic browsing · Quick win

Your website has no questions and answers (FAQ) for AI assistants to quote.

Why it matters for your business

AI assistants answer people's questions by quoting websites that answer them clearly. Questions as headings ("How much does a website cost?") with a short answer below, or an FAQ, are the easiest content for them to quote and link to.

How to fix it

Add a short FAQ to your homepage or main service page: the 5 questions customers ask you most, each as a heading with a 2-3 sentence answer. The page schema suggestions in this report then include the matching FAQ markup.

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

Ready to use: copy, fill in any REPLACE values, paste

An FAQ that AI assistants (and visitors) can read

```
<section>
  <h2>Frequently asked questions</h2>
  <details>
    <summary>REPLACE: How much does it cost?</summary>
    <p>REPLACE: A short, direct answer in 2-3 sentences.</p>
  </details>
</section>
```

WORTH FIXING · Agentic browsing · Quick win

Your homepage is missing these structural areas: <main>.

Why it matters for your business

Header, navigation, main content and footer areas tell AI agents (and screen readers) which part of the page is your actual content and which is menus or small print.

How to fix it

Wrap the matching parts of your page in <main> elements. This doesn't change how the page looks.

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

WORTH FIXING · Performance

Your main content takes 2.9s to appear (good: under 2.5s). (LCP, measured in Google's lab test, as no real-visitor data exists yet.)

Why it matters for your business

Visitors judge a site in its first seconds. If the main picture or headline is slow, many leave before seeing your offer.

How to fix it

Speed up the largest image or text block at the top: use a smaller WebP/AVIF image, preload it with <link rel="preload">, and make sure your hosting responds quickly.

Time: 2 to 3 hours. Usually a job for a web developer.

Where

`https://ridwanulhafiz.me/`

WORTH FIXING Performance

Visitors look at a blank screen for 2.9s before anything appears (good: under 1.8s). (FCP, measured in Google's lab test, as no real-visitor data exists yet.)

Why it matters for your business

A blank screen makes people think your site is down, so they press back.

How to fix it

Remove render-blocking scripts and styles, turn on compression and caching, and use faster hosting or a CDN.

Time: 2 to 3 hours. Usually a job for a web developer.

Where

`https://ridwanulhafiz.me/`

WORTH FIXING Performance

Google rates your homepage's speed on phones 87 out of 100. The main content appears after 2.9 seconds.

Why it matters for your business

More than half of mobile visitors leave a page that takes over 3 seconds to load, and Google ranks faster sites higher. Every second you save keeps more potential customers.

How to fix it

Start with the biggest wins in this report: compress and resize images, remove unused plugins and scripts, turn on caching and compression, and consider a CDN or faster hosting.

Time: 2 to 3 hours. Usually a job for a web developer.

Where

`https://ridwanulhafiz.me/`

WORTH FIXING Accessibility

Document should have one main landmark (1 element on your homepage).

Why it matters for your business

Screen-reader users jump straight to the main content using landmarks; without them they have to listen through your whole menu on every page.

How to fix it

Below you can see the element: where it is on the page (outlined in red), what exactly is wrong, and its HTML. Wrap the page's main content in one <main> element. Step-by-step guidance: https://dequeuniversity.com/rules/axe/4.14/landmark-one-main?application=axeAPI

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

Where on the page

"RH Ridwanul Hafiz Preview CV I Architect Scalable Softwar..." — Document does not have a main landmark

What's wrong

Document does not have a main landmark

```
HTML: <html lang="en">

CSS selector: html
```

WORTH FIXING · Accessibility

1 of the 3 pages we checked skips heading levels (for example from H2 straight to H4).

Why it matters for your business

Screen-reader users jump between headings to skim a page, like reading a table of contents. Skipped levels (a main heading followed directly by a sub-sub-heading) make the page structure confusing.

How to fix it

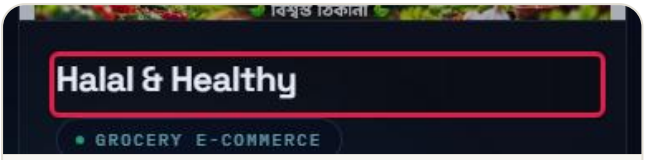

Use headings in order: one H1, then H2 for sections, H3 inside those. Change the look with CSS instead of picking a smaller heading level.

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/work`

Where it is on the page

`<h3> "Halal & Healthy"` on /work

WORTH FIXING · Best practices

Browsers aren't told to stop guessing file types.

Why it matters for your business

This header stops browsers from guessing what a file is, which blocks a trick where an uploaded file is run as a script.

How to fix it

Send the header X-Content-Type-Options: nosniff.

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

WORTH FIXING Best practices

Your site doesn't set a referrer policy.

Why it matters for your business

When visitors click a link to another site, browsers can pass along the full address they came from. A referrer policy keeps private details in your addresses private.

How to fix it

Send the header Referrer-Policy: strict-origin-when-cross-origin.

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`

WORTH FIXING SEO

3 of the 3 pages we checked have descriptions of the wrong length: 3 too long (over 160 characters).

Why it matters for your business

The description is the short text under your title in Google. A good one works like a mini advert and convinces people to click your result instead of a competitor's.

How to fix it

Rewrite each description listed below to 50-160 characters: what the page offers, in your customers' words, ending with a reason to visit. Google cuts off longer ones with … and may replace very short ones with random text from the page.

Time: about 20 minutes. You can usually do this yourself.

Where

`https://ridwanulhafiz.me/`
`https://ridwanulhafiz.me/work`
`https://ridwanulhafiz.me/cv`

Page by page

3 descriptions — length, page by page

```
https://ridwanulhafiz.me/
    198 characters: too long by 38 (Google shows about 160)
    now: "Ridwanul Hafiz architects scalable software that powers business growth. Sen
ior Full Stack Engineer and Team Lead with 10+ years building enterprise platforms, Sa
aS products and business automation."

https://ridwanulhafiz.me/work
    175 characters: too long by 15 (Google shows about 160)
    now: "Platforms in active development and systems already shipped by Ridwanul Hafi
```

```
z — SaaS products, enterprise platforms, e-commerce and business automation, engineere
d end to end."

https://ridwanulhafiz.me/cv
    169 characters: too long by 9 (Google shows about 160)
    now: "Curriculum vitae of Ridwanul Hafiz — 10+ years in software architecture and
full stack engineering, 30+ business systems delivered, career history, education and
skills."
```

WORTH FIXING SEO

2 of the 3 pages we checked have titles longer than 60 characters, so Google cuts them off.

Why it matters for your business

The title is the blue headline people click in Google results and the name on the browser tab. A clear title brings more visitors from search.

How to fix it

Shorten titles to 60 characters or fewer and put the most important words first.

Time: about 20 minutes. You can usually do this yourself.

Where

https://ridwanulhafiz.me/
https://ridwanulhafiz.me/cv

WORTH FIXING Accessibility

All page content should be contained by landmarks (60 elements on your homepage).

Why it matters for your business

Content outside page landmarks is easy to miss for screen-reader users skimming the page.

How to fix it

Below you can see the first 5: where it is on the page (outlined in red), what exactly is wrong, and its HTML. Put all visible content inside <header>, <nav>, <main> or <footer>. Step-by-step guidance: https://dequeuniversity.com/rules/axe/4.14/region?application=axeAPI

Time: 2 to 3 hours. Usually a job for a web developer.

Where

https://ridwanulhafiz.me/

Where on the page

"10+" — Some page content is not contained by landmarks

What's wrong

Some page content is not contained by landmarks

```
HTML: <span class="vstat-value">10+</span>

CSS selector: .vstat:nth-child(1) > .vstat-row > .vstat-value
```

"YEARS OF EXPERIENCE" — Some page content is not contained by landmarks

What's wrong

Some page content is not contained by landmarks

```
HTML: <span class="vstat-label">Years of experience</span>

CSS selector: .vstat:nth-child(1) > .vstat-label
```

"30+" — Some page content is not contained by landmarks

What's wrong

Some page content is not contained by landmarks

```
HTML: <span class="vstat-value">30+</span>

CSS selector: .vstat:nth-child(2) > .vstat-row > .vstat-value
```

"FULL BUSINESS SYSTEMS DELIVERED" — Some page content is not contained by landmarks

What's wrong

Some page content is not contained by landmarks

```
HTML: <span class="vstat-label">Full business systems delivered</span>

CSS selector: .vstat:nth-child(2) > .vstat-label
```

"100%" — Some page content is not contained by landmarks

What's wrong

Some page content is not contained by landmarks

```
HTML: <span class="vstat-value">100%</span>

CSS selector: .vstat:nth-child(3) > .vstat-row > .vstat-value
```

GOOD TO KNOW Best practices

We couldn't look up when ridwanulhafiz.me expires: its registry doesn't publish it.

Why it matters for your business

If your domain name's registration runs out, your website and your email stop working, and someone else can buy the name.

How to fix it

Check the renewal date with the company you bought the name from, and turn on auto-renew.

GOOD TO KNOW Best practices

ridwanulhafiz.me's DMARC record is set to p=none: fake emails are reported but still delivered.

Why it matters for your business

Without these two DNS records, anyone can send emails that look like they come from your address, to trick your customers into paying fake invoices or giving passwords. Gmail and Yahoo also send email without them to spam.

How to fix it

Add the TXT records below in your DNS settings (where you manage your domain, e.g. Cloudflare or your registrar). Your email provider's help pages give the exact SPF line for their service.

Where

`https://ridwanulhafiz.me/`

Ready to use: copy, fill in any REPLACE values, paste

DMARC: a TXT record on _dmarc.ridwanulhafiz.me

What's wrong

What to do with emails that fail SPF: put them in spam (quarantine). Use p=reject once you're sure your own emails pass.

```
v=DMARC1; p=quarantine; rua=mailto:dmarc@ridwanulhafiz.me
```

GOOD TO KNOW · Best practices

About 11% of the text on your homepage is smaller than 12 px on a phone (usually small print).

Why it matters for your business

If people have to zoom in to read your prices, opening hours or offer, many won't. Readable text keeps visitors on the page and makes your business look professional.

How to fix it

Use at least 16 px for normal text on phones, and never less than 12 px, even for small print.

Where

`https://ridwanulhafiz.me/`

GOOD TO KNOW · Best practices

Your homepage has no link to a privacy policy.

Why it matters for your business

A privacy policy tells visitors what you do with their details. Most countries require one as soon as a website collects names, emails or phone numbers, and visitors trust a form more when it's there.

How to fix it

Write a short privacy policy (what you collect, why, how long you keep it, how to ask for it to be deleted), publish it as a page and link to it in the footer.

GOOD TO KNOW · Best practices

Your website has no security.txt, so people who find a security problem don't know how to tell you.

Why it matters for your business

When someone finds a security hole in your website, security.txt tells them how to warn you privately, instead of the problem going unreported.

How to fix it

Create the file below at /.well-known/security.txt on your website.

Page by page

/.well-known/security.txt

```
Contact: mailto:security@ridwanulhafiz.me
Expires: 2027-12-31T23:59:59Z
```

GOOD TO KNOW · SEO

Your website has no map or directions link.

Why it matters for your business

If customers can visit you, a map or a directions link gets them to your door, and links your website to your Google Business Profile.

How to fix it

If customers can visit you, add a "Get directions" link to your Google Maps listing (Share > Copy link in Google Maps) on your Contact page and footer.

GOOD TO KNOW · SEO

1 of the 3 pages we checked has a heading structure that could be clearer.

Why it matters for your business

Headings are the outline of a page. Google reads them to understand what each section is about, and visitors skim them to find what they came for. Empty, repeated or jumbled headings hide your best content from both.

How to fix it

Below is the outline of each page as Google sees it, with the problems marked. Give every page one H1 that states its topic (different on every page), then H2 for each section and H3 inside those. Every heading needs real words.

Where

`https://ridwanulhafiz.me/work`

Page by page

https://ridwanulhafiz.me/work — skipped heading levels, long page without H2 sections

```
H1  Every system, builtto carryreal businesses.
    H3  Halal & Healthy   ⟵ skips H2
    H3  Proggaa
    H3  efleetdesk
    H3  BizzAcquire
    H3  Tarbiat Publication
    H3  Next Dial BD
    H3  MRM Stride
    H3  Daaris
```

```
H3  Facility Management SaaS
H3  Building Management Software
H3  INnUP
H3  Mediprospects
H3  Carlux365
H3  AssetGo
H3  ReelBites
H3  Adhwa School
H3  Makkah Medical Center
H3  Al-Bayan Model School
H3  Kafel
H3  Wahj
```

GOOD TO KNOW · Agentic browsing

Your homepage has no link to an About page.

Why it matters for your business

Before recommending a business, AI assistants check who it is: an About page, and the same business on LinkedIn, Facebook or Google. Linking them tells the AI these are all you, so it can recommend you with confidence.

How to fix it

Link to an About page (who you are, since when, where, what you do) from the menu, and to your business profiles from the footer. List the same profiles in your Organization schema's sameAs.

Where

`https://ridwanulhafiz.me/`

What's healthy (44)

Performance

- ✓ Google rates your homepage's speed on computers 92 out of 100. The main content appears after 1.2 seconds.
- ✓ Images below the first screen load only when needed.
- ✓ Your homepage downloads 0.5 MB in total. That's nice and light.
- ✓ Nothing blocks your first screen from appearing.

Accessibility

- ✓ All links and buttons have a readable name.
- ✓ Your homepage declares its language ("en").
- ✓ All 28 images have a description.

Best practices

SEO

- ✓ On a phone, the first screen shows a next step: "Let's Connect".
- ✓ Your security certificate (Let's Encrypt) is valid until 3 January 2027 (80 days).
- ✓ Your pages declare their character set.
- ✓ Your homepage ran without JavaScript errors.
- ✓ Your site has a Content Security Policy.
- ✓ Your pages use the modern HTML standard.
- ✓ Your private files (.env, .git) aren't public.
- ✓ Visitors to http:// are sent to the secure version.
- ✓ Your website uses a secure HTTPS connection.
- ✓ All files on your secure pages are loaded securely.
- ✓ Your homepage fits a 390 px phone and an 820 px tablet without sideways scrolling.
- ✓ We found no outdated versions of common code libraries in your pages.
- ✓ Your homepage shows what customers say about you.
- ✓ All 16 links and buttons are big enough to tap.
- ✓ No other companies set cookies when your homepage loads.
- ✓ Your homepage adapts to phone screens.

Agentic browsing

- ✓ Your robots.txt lets AI crawlers in (OAI-SearchBot, PerplexityBot, GPTBot, ClaudeBot).
- ✓ AI crawlers that don't run JavaScript still see 100% of your homepage text.
- ✓ Your website has an llms.txt guide for AI assistants.
- ✓ Every link and button on your homepage has a clear name.
- ✓ Your homepage describes itself in machine-readable form (BreadcrumbList, CreativeWork, ImageObject, Person, ProfilePage, WebSite).
- ✓ Your website shows a current year (© 2026).
- ✓ All 21 links to other websites we checked work. Links to linkedin.com can't be checked by a robot, so we skipped them.
- ✓ All 21 images we checked load.
- ✓ All 4 internal links we checked work.
- ✓ Your homepage names its preferred address correctly.
- ✓ Your homepage shows how to contact you.
- ✓ Every page we checked has its own title.
- ✓ All 28 images on the 3 pages we checked are well described.
- ✓ Google is allowed to show all the pages we checked.
- ✓ Every page has its essential meta tags.
- ✓ Your robots.txt lets search engines in.
- ✓ Every page has exactly one main heading.
- ✓ Your sitemap lists 3 pages.
- ✓ Every page has a complete link preview.
- ✓ All 4 page addresses we found are clean.
- ✓ Customers can message you on WhatsApp.

YOUR NEXT STEP

How Ridwanul can help

One service for each vital sign that needs care, matched to what this report found. Fixing everything is about 2 days of work: 15 quick fixes you can do yourself, and about 10 hours for a developer. Ridwanul can take that off your hands.

PERFORMANCE

Speed & Core Web Vitals Optimisation

Faster pages keep visitors and rank higher. I optimise images, loading, caching and server response so your site passes Google's Core Web Vitals.

Treats the 4 performance issues in this report

Needs attention

ACCESSIBILITY

Accessibility Fixes (WCAG)

Reach every customer and reduce legal risk. I make your site usable with screen readers, keyboards and for people with visual impairments.

Treats the 5 accessibility issues in this report

Needs attention

AGENTIC BROWSING

AI-Ready Website (Agentic Browsing)

Be visible in ChatGPT, Claude and AI search. I add llms.txt, AI crawler rules, structured data and semantic markup so AI agents can read and recommend your business.

Treats the 3 agentic browsing issues in this report

WHEN PATCHING ISN'T ENOUGH

Custom Web App & Website Rebuild

When patching isn't enough, I design and build a modern, fast, secure website or business system — Laravel, React/Next.js, Vue or Django.

Performance | SEO | Accessibility | Best practices | Agentic browsing

Let's fix this together
